# Dannie Håkansson

## Senior Fullstack Developer

070-788 23 01
danniehakan@gmail.com
danniehakansson.com

Senior Fullstack Developer with over ten years of professional experience, working with Go, TypeScript, and React. Experienced in distributed systems, cloud infrastructure, and customer-facing applications serving global markets. Combines hands-on development with technical leadership, taking solutions from architecture through production rollout, with a focus on simplifying complex systems.

Core technologies: Go, TypeScript, React, PostgreSQL, GCP, Terraform, Cloudflare Workers, CI/CD.

### IKEA – Ingka Group Digital, Malmö

**Lead Software Engineer – Ratings & Reviews | Jun 2025 – Present**

- Provided hands-on technical leadership for a team of six engineers, setting architectural direction, mentoring colleagues, and mapping technical debt to product needs through a team-wide focus on simplification.
- Designed, implemented, and rolled out the core Go review-sharing and rating-aggregation engine serving Web, App, and store kiosks across 20+ markets. Replaced fragile event-driven processing with batch reconciliation, using atomic PostgreSQL updates and fingerprint-based change detection to maintain consistency and avoid unnecessary writes.
- Sole engineer responsible for migrating a critical API cache and proxy layer from Go on Fastly to TypeScript on Cloudflare Workers against a contract-expiry deadline. Designed caching, Terraform infrastructure, CI/CD, integration and load tests, and migrated all clients without cutover disruption before decommissioning Fastly.
- Designed and delivered the application architecture for AI-generated review summaries and topics, launched across the US IKEA website. Built Go-based task orchestration, data models, persistence, and

cached API delivery, integrating a Data Science-owned Python service using Gemini Flash through Vertex AI.

**Senior Software Engineer – Ratings & Reviews | Jul 2024 – May 2025**

- Designed and maintained distributed microservices and high-traffic APIs handling approximately 1,000 requests per second across multiple markets and client applications.
- Built and maintained GCP infrastructure with Terraform and GitHub Actions, and investigated production issues through cloud logs, metrics, and alerting.

**Senior Software Engineer – Content Recommendations | Oct 2023 – Jun 2024**

- Co-developed the migration of a personalised image carousel from client-rendered React to edge-rendered Preact on Fastly Compute, including server rendering and client hydration. Delivered responsive layouts, image optimisation, and accessibility, with Terraform and GitHub Actions deployment workflows.
- Delivered the carousel layout in the initial HTML to address layout shifts within IKEA's microfrontend architecture. A/B testing showed increased add-to-cart clicks within the carousel's product modal.

**Senior Software Engineer – Content Moderation | Jun 2023 – Sep 2023**

- Contributed to the rollout of a content moderation platform for product reviews and images, integrating external vendors within an architecture of approximately 15 microservices.

*Go, TypeScript, React, Preact, PostgreSQL, GCP, Terraform, Docker, Cloudflare Workers, Fastly Compute, Vertex AI, GitHub Actions*

## Conscious Web Dev, Helsingborg

**Content Creator | May 2025 - Present**

- My own YouTube channel focused on helping developers become more conscious, especially in times of lower quality AI material
- Researched, drafted, recorded, edited and published two videos (thus far)
- https://www.youtube.com/@ConsciousWebDev

## Tubestamps, Helsingborg – *Creator, Developer*

### Creator & Developer, personal project | 2019–Present

Self-developed and self-hosted a public facing browser extension focused on easing the navigation of YouTube video content

- Designed and implemented everything end to end
- Currently has 700+ active users globally
- https://tubestamps.app/

*TypeScript, React, Chrome Extension Manifest V3 ecosystem, UI/UX Design*

## Changemaker Educations, Stockholm

### Content Creator | Oct 2021 - Jan 2022

Taught 40 students the foundations of frontend development through online and on-site lectures

- Took students from knowing nothing about web technologies, to the point where they were able to build and deploy websites with rich interactivity. In addition, a large focus was put on the ability to read and understand requirements
- Education level: Yrkeshögskola

*JavaScript, HTML, CSS, Responsive Web Design, Node, Version Control (Git)*

## Klarna, Stockholm

### Frontend Developer | Mar 2020 - May 2021

- Responsible for setting up two internal documentation websites providing technical documentation within and outside our domain, meant for internal stakeholders/integrators of the tools provided by our teams
- Worked closely with processes related to documentation (editing, reviewing, publishing) with a foundation based on component (React) based markdown
- This work eventually ended up forming a team around customer obsession

*JavaScript, React, Gatsby, TypeScript, GraphQL, Postgres, Docker, AWS, Node*

## DYNAMO Digital Ventures, Stockholm

### Fullstack Developer | Jun 2015 - Sep 2019

Employed as a consultant, hired by several clients listed below. Contracts were shorter as most assignments involved companies in startup positions in need

of acceleration (MVP development). Only larger assignments have been included

### NCC (LoopRocks), Stockholm | Feb 2017 - Dec 2017

- LoopRocks was the initiative of NCC to change the construction industry to something more climate aware by providing a second hand market for dirt, gravel and rubble. LoopRocks doesn't exist anymore
- Maintained and developed features for the backend system, which included an API consumed by mobile clients as well as an admin application where ads could be managed
- As they expanded to other markets such as Denmark, Finland, Norway and The Netherlands, I was involved in cementing the technical foundation for this. This included, amongst other things, multi-language support and ads belonging to "different markets".
- *JavaScript, jQuery, Material Design Lite, Python, Django, Postgres*

### Triple, Stockholm | Oct 2016 - Feb 2017

- Triple enabled travelers to book activities published by "hosts" that live in the city they are visiting, providing a more personal type of sightseeing. They used to exist on gotriple.com but has since gone out of business due to bigger players such as AirBnb Experiences
- Worked closely with UI/UX to build the entire gotriple.com frontend experience for the MVP launch. This happened during an intense period of 12 weeks.
- *Python, Django, JavaScript, Bootstrap*

### ICA, Stockholm | Nov 2015 - Jul 2016

- As part of an agile team I built "HITTA VARA", a web application where the customers in the store can find their wares on an interactive and searchable map.
- Built a website for ICA-handlare (franchise owners) to draw their map so that they could be populated with wares accurately, involving writing highly interactive JS.
- Built a second tool for store visitors to search for products within the map. This was built for a stationary (Chrome Kiosk mode) computer within the stores themselves
- The HITTA VARA project also expanded to the ICA App, connecting to features such as personal shopping lists (i.e click on item and see it highlighted on the map).
- *JavaScript, AngularJS, .NET*

### FitnessCollection, Stockholm | Jun 2015 - Dec 2015 Developer

- FitnessCollection aggregates supply of gyms and yoga studios in one membership.
- As my first consultant gig, I was part of building an admin/back office system meant for FitnessCollection themselves to manage training sessions, users, organizations, studios etc.
- *JavaScript, AngularJS, Bootstrap, Gulp, Google App Engine*

## Education

### Yrkeshögskola C3L Systemutvecklare Java, Stockholm | Aug 2013 - May 2015

Vocational education with a syllabus focused on Java backend and databases but also mobile application development, web development, agile methodologies and communication. I was the class representative during the last year.
